Water supply systems get water from a variety of locations after appropriate treatment, including groundwater (aquifers), surface water (lakes and rivers), and the sea through desalination. The water treatment steps include, in most cases, purification, disinfection through chlorination and sometimes fluoridation.

Water supply - Wikipedia

A water engineer is someone who deals with the provision of clean water, disposal of waste water and sewage, and the prevention of flood damage. Their job involves repairing, maintaining and building structures that control water resources (for example, sea defence

walls, pumping stations and reservoirs). Global warming, ageing infrastructure, population growth, and higher quality living standards are just some of the challenges a water engineer has to address.
