Some parts of South Africa’s nine provinces (Limpopo, Mpumalanga and KwaZulu-Natal) are endemic for malaria, and 10% of the population (approximately 4.9 million persons) is at risk of contracting the disease. Malaria transmission in South Africa is seasonal, with malaria cases starting to rise in October, peaking in January and February, and waning towards May.

Malaria Introduction - Department of Health

Malaria, as a disease and public health challenge, reflects an extremely complex set of interactions between the parasite, the human host, and the vectors responsible for transmission (Sidebar and Figure 1). Environmental, social, economic, and behavioral factors enable and foster these interactions and, thus, support perpetuation of malaria as long as the life cycle of the parasite remains intact.
