The exponent, y , in the expression b^y can also be written as the logarithm, $\log_b b^y$, and the value of x is the result of raising b to the power of y . $y = 3$. Since the equation of a logarithm is equivalent to an exponential equation, the logarithm can be converted to the exponential equation $b^y = x$, $b^y = x$, and then properties of exponents can be applied to solve for x .
