The Difference Between a Control

Variable and Control Group

A controlled variable is one which the researcher holds constant (controls) during an experiment. It is also known as a constant variable or simply as a "control." The control variable is not part of an experiment itself—it is neither the independent nor dependent variable—but it is important because it can have an effect on the results.

Controlled Variable Definition - ThoughtCo

A control is just another type of variable. The three types of variables should not be confused as they are completely different. Independent variables are changes occurring due to the person doing the experiment. Dependent variables change based upon changes in

the independent variables. Controlled variables are any other outside variables that may affect the dependent variable.
