Softtissue Surgery Of The Craniofacial Region

A facial cleft is an opening or gap in the face, or a malformation of a part of the face.Facial clefts is a collective term for all sorts of clefts. All structures like bone, soft tissue, skin etc. can be affected. Facial clefts are extremely rare congenital anomalies.There are many variations of a type of clefting and classifications are needed to describe and classify all types of clefting.

Craniofacial cleft - Wikipedia

The craniofacial region is anatomically complex and is of critical functional and cosmetic importance, making reconstruction challenging. The limitations of current surgical options highlight the importance of developing new strategies to restore the form, function, and esthetics of missing or damaged soft tissue and skeletal tissue in the face and cranium.
