To measure the energies accurately the time (Δt) required is more that is Δt tends to infinity or otherwise. According to Heisenberg’s uncertainty relation. $\Delta E = h / 2 \pi \Delta t$. Where ΔE is the uncertainty in the measurement of energies and Δt is the mean life time of the level is finite and of the order of 10-8 s which is a finite value. Therefore ΔE must have a finite energy spread that means the energy levels are not sharp and hence the broadening of the spectral lines.
