In continuum mechanics, stress is a physical quantity that expresses the internal forces that neighbouring particles of a continuous material exert on each other, while strain is the measure of the deformation of the material. For example, when a solid vertical bar is supporting an overhead weight, each particle in the bar pushes on the particles immediately below it.

Stress (mechanics) - Wikipedia

Piping constitutes 25% to 35% of the material of a process plant, requires 30% to 40% of the erection labor, and consumes 40% to

48% of the engineering man-hours [1]. The actual importance of piping, however, can far exceed these percentages. An entire piping system is composed of a large number of components.
