Automatic Bottle Filling System Using Micro Controller ...

The system makes use of filling using piston and syringe arrangement along with a capping system using motorized arrangement all integrated in a single machine. The entire assembly consists of a conveyor that pushes empty bottles towards the filling head. The filling head is responsible for filling of bottles with water, later this assembly pushes the bottle in a circulating disc, which brings it to the capping station that places

a cap on the bottle.

Filling water bottles automatically with Arduino. If you need to fill a bunch of water bottles, you could do so using your hands and a sink... or you could automate the task like YouTuber Easy HomeMade Projects. The build is controlled by an Arduino, spinning a carousel of a half-dozen bottles under a fill hose with a stepper motor and timing belt. When in place, the system's water pump is activated, filling each bottle for a set length of time.
