The coastal environment produces challenges specific for this branch of engineering: waves, storm surges, tides, tsunamis, sea level changes, sea water and the marine ecosystem. Most often, in coastal engineering projects there is a need for metocean conditions: local wind and wave climate, as well as statistics for and information on other hydrodynamic quantities of interest.

February 2006 Underlayer for Rubble-Mound Structures. Larger coastal structures exposed to bigger waves consist of a core covered by one or more underlayers of progressively larger stone, and an armor layer of large stones or concrete armor units. Mattresses could be deployed as an underlayer for some rubble-mound structures.

The Mid-Atlantic United States flood of 2006 was a significant flood that affected much of the Mid-Atlantic region of the eastern United States. The flooding was very widespread, affecting numerous rivers, lakes and communities from upstate New York to North Carolina. It was widely considered to be the worst flooding in the region since Hurricane David in 1979.
