Concomitant venous thromboembolism (VTE), a potential cause of unexplained deaths, has been frequently reported in COVID-19 cases, but its management is still challenging due to the complexity between antithrombotic therapy and coagulation disorders.

Prevention and Treatment of Venous Thromboembolism ...

Venous hypertension is a main cause of leg ulcers and it is important to remember that this is often a chronic disease that, without venous intervention, requires lifelong management. Treatments for venous hypertension aim to reduce the pressure in the veins; this can be accomplished through venous intervention including surgical removal, venous ablation or sclerotherapy of the superficial/perforating veins or by applying compression therapy, detailed in Box 1 (Atkin, 2019a; 2019b).
