The Hidden Strengths of Learning and Succeeding at Your Own Pace *Broadway Books*

A groundbreaking exploration of what it means to be a late bloomer in a culture obsessed with SAT scores and early success, and how finding one's way later in life can be an advantage to long-term achievement and happiness. We live in a society where kids and parents are obsessed with early achievement, from getting perfect scores on SATs to getting into Ivy League colleges to landing an

amazing job at Google or Facebook--or even better, creating a startup with the potential to be the next Google or Facebook or Uber. We see software coders becoming millionaires or even billionaires before age 30 and feel we are failing if we are not one of them. But there is good news. A lot of us--most of us--do not explode out of the gates in life. That was true for author Rich Karlgaard, who had a mediocre academic career at Stanford (which he got into by a fluke), and after graduating, worked as a dishwasher, nightwatchman, and typing temp before finally finding the inner motivation and drive that ultimately led him to start up a high-tech magazine in Silicon Valley, and eventually to become the publisher of Forbes magazine. There is a scientific explanation for why so many of us bloom later in life. The executive function of our brains doesn't mature until age 25--and later for some. In fact our brain's capabilities peak at different ages. We actually enjoy multiple periods of blooming in our lives. Based on several years of research, personal experience, and interviews with neuroscientists and psychologists, and countless people at different stages of their careers, Bloom reveals how and when we achieve full potential--and why an algorithmic acuity in math is such an anomaly in terms of career success.

Scorched Earth

Australia's secret plan for total war under Japanese invasion in World War II *Allen & Unwin*

In 1942 the threat of Japanese invasion hung over Australia. The men were away overseas, fighting on other fronts, and civilians were left unprotected at home. Following the attack on Pearl Harbor and the Japanese advance south, Prime Minister Curtin ordered state governments to prepare. From January 1942, a team frantically pulled together secret plans for a 'scorched earth' strategy. The goal was to prevent the Japanese from seizing resources for their war machine as they landed, and capturing Australians as slaves as they had done in Malaya and elsewhere in Asia. From draining domestic water tanks to sinking dinghies and burning crops, from training special citizen squads to evacuating coastal towns, 'Total war, total citizen collaboration' was the motto. Today these plans vividly evoke the fraught atmosphere of the year Australia was threatened with invasion. After the war these top secret plans were forgotten. This is the first time they have ever been made public. 'This is a treasure trove, a gold mine, a Christmas-every-day cornucopia of rich Australian history...'

Technical Writing

A Practical Guide for Engineers and Scientists *CRC Press*

Engineers and scientists of all types are often required to write reports, summaries, manuals, guides, and so forth. While these individuals certainly have had some sort of English or writing course, it is less likely that they have had any instruction in the special requirements of technical writing. Filling this void, Technical Writing: A Practical Guide for Engineers and Scientists enables readers to write, edit, and publish materials of a technical nature, including books, articles, reports, and electronic media. Written by a renowned engineer and widely published technical author, this guide complements the traditional writer's reference manuals and other books on technical writing. It helps readers understand the practical considerations in writing technical content. Drawing on his own work, the author presents many first-hand examples of writing, editing, and publishing technical materials. These examples illustrate how a publication originated as well as various challenges and solutions.

Open Technical Communication

"Technical communication is the process of making and sharing ideas and information in the workplace as well as the set of applications such as letters, emails, instructions, reports, proposals, websites, and blogs that comprise the documents you write...Specifically, technical writing involves communicating complex information to a specific audience who will use it to accomplish some goal or task in a manner that is accurate, useful, and clear. Whether you write an email to your professor or supervisor, develop a presentation or report, design a sales flyer, or create a web page, you are a technical communicator." (Chapter 1)

Sexual Harassment of Women

Climate, Culture, and Consequences in Academic Sciences, Engineering, and Medicine

National Academies Press

Over the last few decades, research, activity, and funding has been devoted to improving the recruitment, retention, and advancement of women in the fields of science, engineering, and medicine. In recent years the diversity of those participating in these fields, particularly the participation of women, has improved and there are significantly more women entering careers and studying science, engineering, and medicine than ever before. However, as women increasingly enter these fields they face biases and barriers and it is not surprising that sexual harassment is one of these barriers. Over thirty years the incidence of sexual harassment in different industries has held steady, yet now more women are in the workforce and in academia, and in the fields of science, engineering, and medicine (as students and faculty) and so more women are experiencing sexual harassment as they work and learn. Over the last several years, revelations of the sexual harassment experienced by women in the workplace and in academic settings have raised urgent questions about the specific impact of this discriminatory behavior on women and the extent to which it is limiting their careers. Sexual Harassment of Women explores the influence of sexual harassment in academia on the career advancement of women in the scientific, technical, and medical workforce. This report reviews the research on the extent to which women in the fields of science, engineering, and medicine are victimized by sexual harassment and examines the existing information on the extent to which sexual harassment in academia negatively impacts the recruitment, retention, and advancement of women pursuing scientific, engineering, technical, and medical careers. It also identifies and analyzes the policies, strategies and practices that have been the most successful in preventing and addressing sexual harassment in these settings.

Sinuous Objects

Revaluing Women’s Wealth in the Contemporary Pacific *ANU Press*
Some 40 years ago, Pacific anthropology was dominated by debates about ‘women’s wealth’. These exchanges were generated by Annette Weiner’s (1976) critical reappraisal of Bronisław Malinowski’s classic work on the Trobriand Islands, and her observations that women’s production of ‘wealth’ (banana leaf bundles and skirts) for elaborate transactions in mortuary rituals occupied a central role in Trobriand matrilineal cosmology and social organisation. This volume brings the debates about women’s wealth back to the fore by critically revisiting and engaging with ideas about gender and materiality, value, relationality and the social life and agency of things. The chapters, interspersed by three poems, evoke the sinuous materiality of the different objects made by women across the Pacific, and the intimate relationship between these objects of value and sensuous, gendered bodies. In the Epilogue, Professor Margaret Jolly observes how the volume also ‘trace[s] a more abstract sinuosity in the movement of these things through time and place, as they coil through different regimes of value ... The eight chapters ... trace winding paths across the contemporary Pacific, from the Trobriands in Milne Bay, to Maisin, Wanigela and Korafe in Oro Province, Papua New Guinea, through the islands of Tonga to diasporic Tongan and Cook Islander communities in New Zealand’. This comparative perspective elucidates how women’s wealth is defined, valued and contested in current exchanges, bride-price debates, church settings, development projects and the challenges of living in diaspora. Importantly, this reveals how women themselves preserve the different values and meanings in gift-giving and exchanges, despite processes of commodification that have resulted in the decline or replacement of ‘women’s wealth’.
