This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.

Educating One and All *National Academies Press*

In the movement toward standards-based education, an important question stands out: How will this reform affect the 10% of school-aged children who have disabilities and thus qualify for special education? In Educating One and All, an expert committee addresses how to reconcile common learning for all students with individualized education for "one"â€"the unique student. The book makes recommendations to states and communities that have adopted standards-based reform and that seek policies and practices to make reform consistent with the requirements of special education. The committee explores the ideas, implementation issues, and legislative initiatives behind the tradition of special education for people with disabilities. It investigates the policy and practice implications of the current reform movement toward high educational standards for all students. Educating One and All examines the curricula and expected outcomes of standards-based education and the educational experience of students with disabilitiesâ€"and identifies points of alignment between the two areas. The volume documents the diverse population of students with disabilities and their school experiences. Because approaches to assessment and accountability are key to standards-based reforms, the committee analyzes how assessment systems currently address students with disabilities, including testing accommodations. The book addresses legal and resource implications, as well as parental participation in children's education.

The Special Educator's Guide to Assessment *SAGE Publications*

Special education students often learn about the characteristics of disabilities, but can lack an understanding of the relationship between diagnostic assessment and eligibility for special education services. The Special Educator's Guide to Assessment: A Comprehensive Overview by IDEA Disability Category focuses on the role that assessment plays in the diagnosis of a disability, determination of eligibility for special education services, and education of students with disabilities to provide a meaningful interconnection between assessment concepts and classroom application for teachers. Authors Tara S. Guerriero, Mary A. Houser, and Vicki A. McGinley want to ensure that future special education teachers have the preparation to provide comprehensive instruction to P-12 students through this text. While special education teachers are often not the ones conducting comprehensive evaluations, it is paramount that they understand their students' individual characteristics, and understand how assessment is used to determine diagnosis and eligibility. Framing the text around The Individuals with Disabilities Act (IDEA) provides students with concrete standards by which all disabilities are evaluated and regulated in our public educational system. Part I introduces the basic topics of assessment, ethics, and assessment types. Part II moves on to provide diagnostic and eligibility criteria according to IDEA categories that are most commonly diagnosed in an educational setting while Part III describes the criteria for IDEA categories most commonly diagnosed in a medical setting. Features like case studies and sample comprehensive evaluations help bring to life assessment and how it applies in real classrooms. The Assessment of Special Educational Needs *Routledge*

First published in 1992. Special educational needs are being defined in new ways. Changing laws and perspectives in many countries present new challenges to practitioners. The fundamental shift underlying all these changes is the idea that handicap is not an absolute phenomenon, that special educational needs are relative to a person's environment. Once this is accepted, it is inevitable that there will be a radical re-examination of how such needs are identified and how they are assessed. This book draws together a range of contributions from leading figures in special education worldwide, to emphasise assessment in the service of prevention, of teaching, and of mainstreaming and integration. It is not enough to understand children's individual strengths and weaknesses. The primary objective of assessment is to guide intervention, and for that purpose it must have a broader focus and not concentrate exclusively on the target individuals who appear to have disabilities or learning difficulties: the learning environment is equally important as a focus for assessment. The book is divided into three sections that explore three broad themes: empowering children and parents during the assessment process; designing assessment so that it supports the integration and mainstreaming of children rather than their segregation; and making improvements through specific approaches to assessment.

Coverage includes all of the core information expected of an assessment text, but the book goes far beyond the basics by addressing multicultural considerations, technology and assessment, high-stakes testing, and the reauthorization of IDEA. The book clearly shows how assessment is more than giving a test to a child, but is an essential tool for teachers as they help students achieve, learn, develop, and grow. 0133400026 / 9780133400021

Assessing Students *Routledge*

Assessment methods can largely determine what and how students learn, so it is vital that our assessment methods are appropriate to our true educational purposes. This book examines the issues underlying assessment procedures, such as truth, fairness, trust, humanity and social justice and goes on to consider the five key dimensions of assessment: * why assess? * what to assess? * how to assess? * How to interpret? * How to respond? Having guided us through the many conceptual and terminological traps, the book ends constructively with seventeen proposals for making assessment work in the best interests of our students.
