Spectral Analysis And Time Series

The elementary text by Brockwell & Davis *Introduction to Time Series and Forecasting* presents the needed material on time series analysis. In Chapter 1, Priestly sets up the motivation for considering spectral analysis of stationary time series, and gives four practical reasons for the use of spectral methods.

Spectral Analysis and Time Series, Two-Volume Set, 1-2 ...

A time series is a sequence of observations recorded at a succession of time intervals. In general, time series are characterized by dependence. The value of the series at some time t is generally not independent of its value at, say, $t-1$. We use specialized statistics to analyze time series and specialized data structures to represent them in R. These data structures greatly facilitate our subsequent analysis.

Lecture 3: Spectral Analysis

Spectral analysis is a very general method used in a variety of domains. The spectral representation of a time series X_t , ($t=1, \dots, n$), decomposes X_t into a sum of sinusoidal components with uncorrelated random coefficients. From there we can obtain decomposition the autocovariance and autocorrelation functions into sinusoids.
