Systems Physiology I: Cardiovascular, Respiratory, and ...

i. Cell physiology: This is the cornerstone of human physiology; it is the study of the functions of cells. It deals with events at the chemical and molecular levels. ii. Special physiology: this is the study of the physiology of special organs. For example, renal physiology is the study of kidney function. iii.

HEM 604 BASIC ANATOMY AND PHYSIOLOGY OF HUMAN BODY

Physiology, however, retains an important position among the functional sciences that are closely related to the field of medicine. Although many research areas, especially in mammalian physiology, have been fully exploited from a classical-organ and organ-system point of view, comparative studies in physiology may be expected to continue. The solution of the major unsolved problems of physiology will require technical and expensive research by teams of specialized investigators.
